

Welcome! We're glad you're starting commercial garbage service with Homewood Disposal. Please follow these corral/ enclosure construction guidelines for safe and timely garbage service. Your municipality may provide additional guidelines.

Gate Opening - The garbage truck will need room to drive into the enclosure to empty your dumpster. Gate openings should be a minimum of 10 feet wide. Please mount the hinges outside of the wall. Please install gate stops to hold gate open while we empty the dumpster.

Enclosure Dimensions - The measurements shown (see diagrams) are for an 8 yard dumpster, and a 2 yard dumpster. Enclosure dimensions will be larger for multiple containers. Large "rear-load" commercial dumpsters (not shown) require a minimum enclosure depth of 16 feet.

Building Material - Chain link, block, brick, wood, and PVC are common enclosure building materials. Consult your municipality for fencing material and height requirements. There should be a 8 inch thick

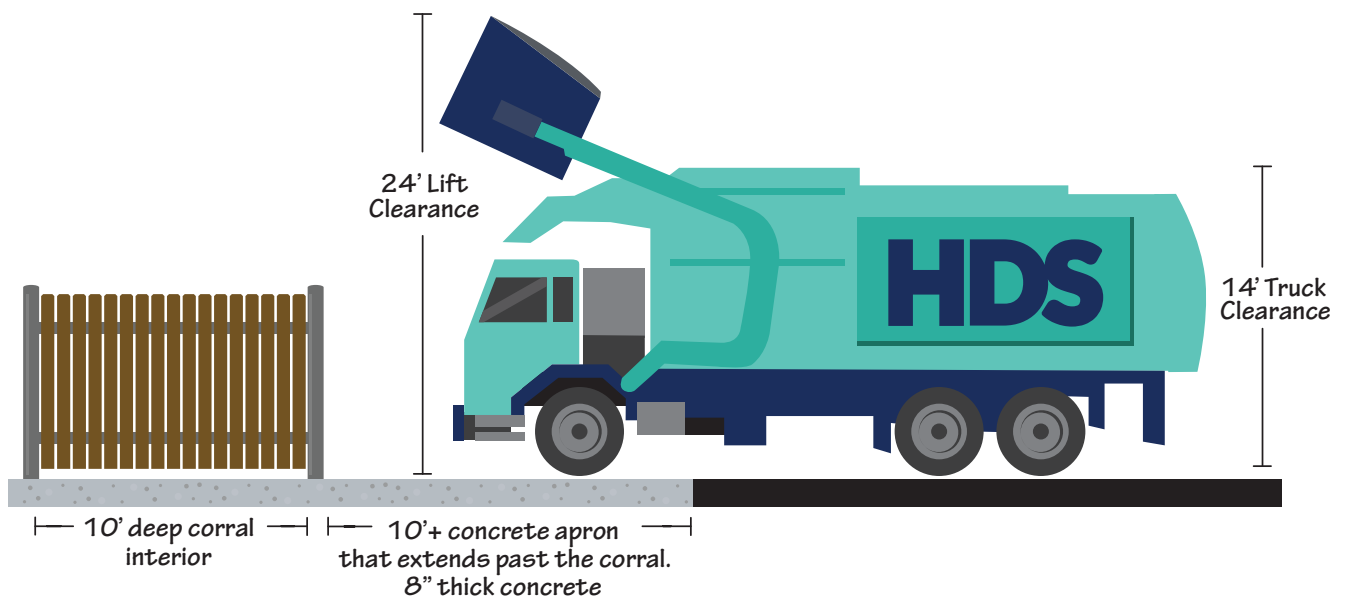

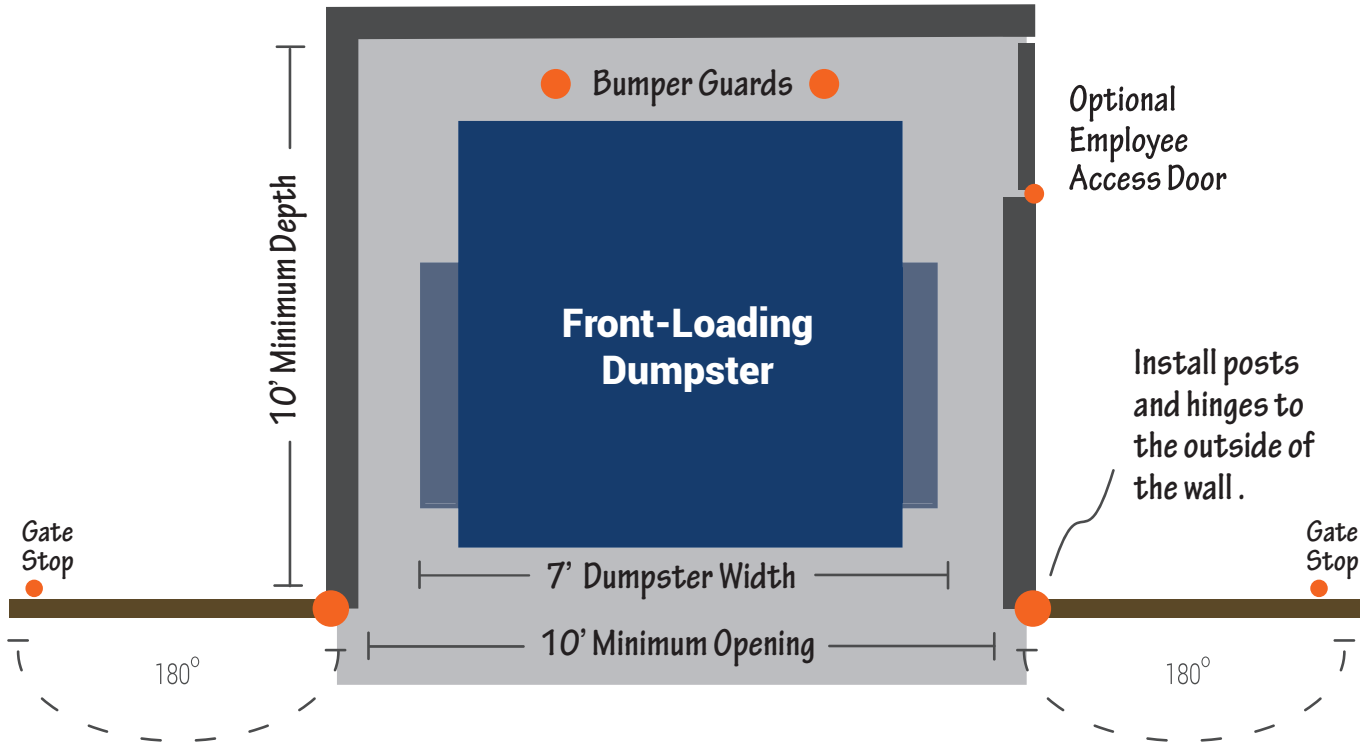

concrete pad inside the enclosure and extending at least 10 feet in front of the opening. Reinforced 4000 psi is recommended. This reduces damage to your pavement and the trucks.

Truck Access - Please leave 45 feet of unobstructed clearance in front of the enclosure to allow the truck direct access. 24 feet of clearance above the dumpster is needed for the dumpster to be lifted. 14 feet of clearance is needed for the truck in all other areas.

Extras - Allow extra space within the enclosure for grease containers and other items. Leave room for employees to walk on every side of the container. To limit gate damage, additional employee access on the side of the enclosure is recommended so employees do not have to open the large gates.

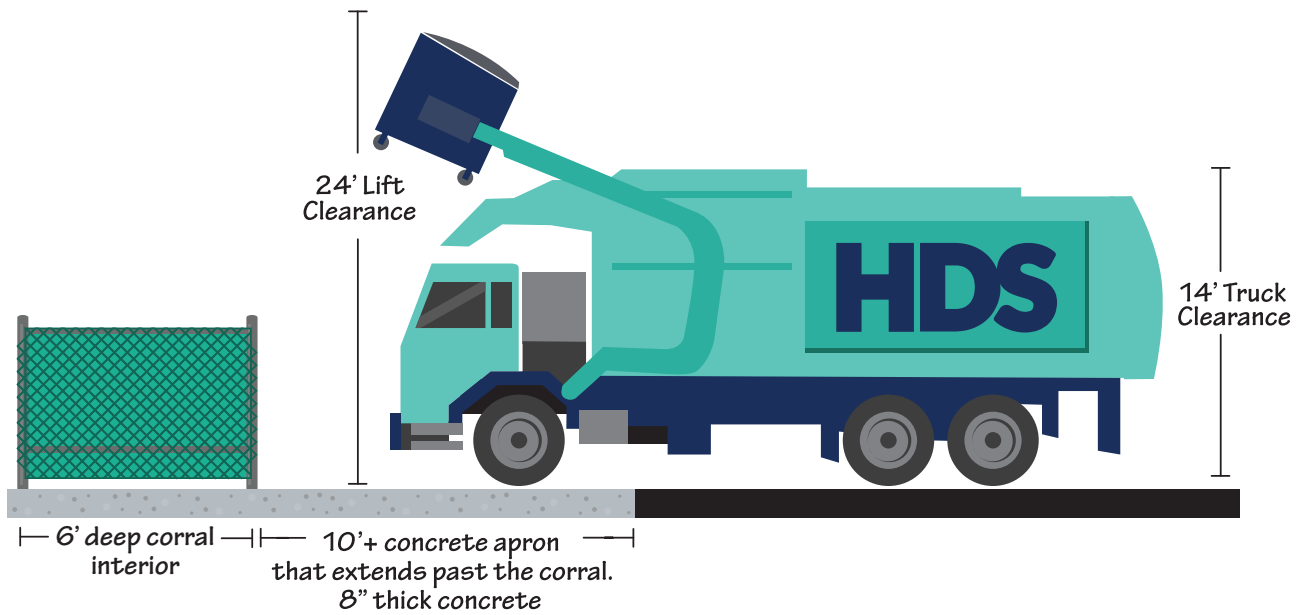

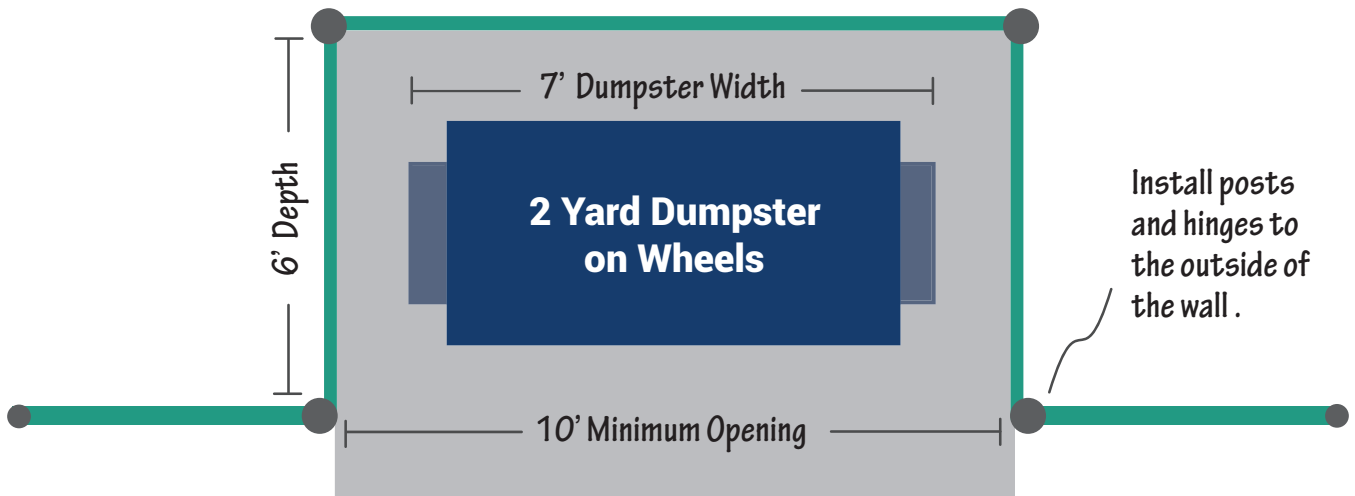

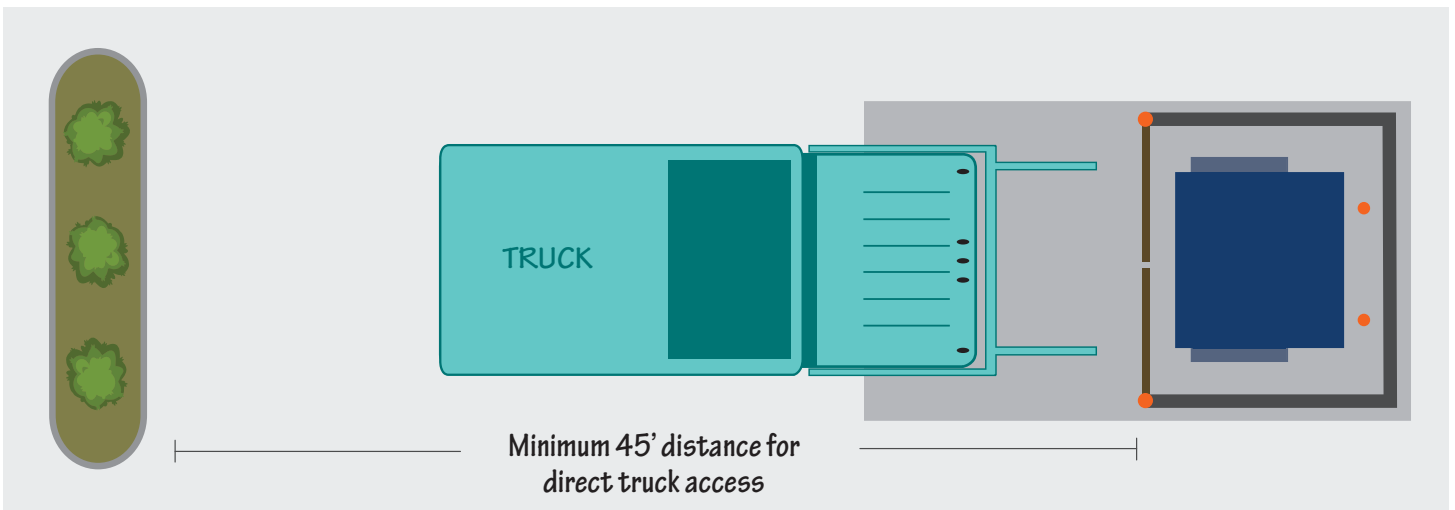

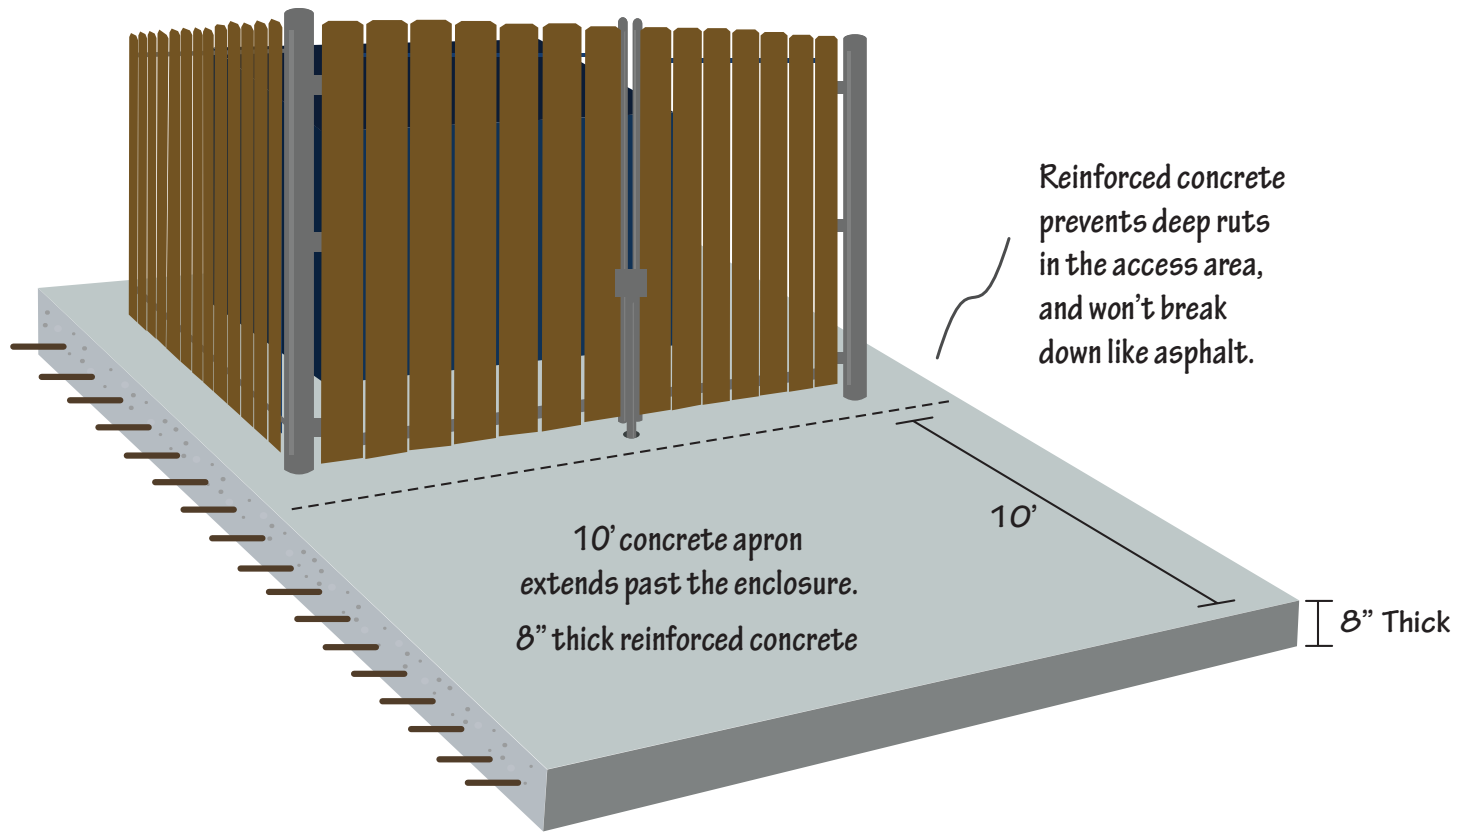

6 or 8 Yard Dumpster Minimal Enclosure Requirements

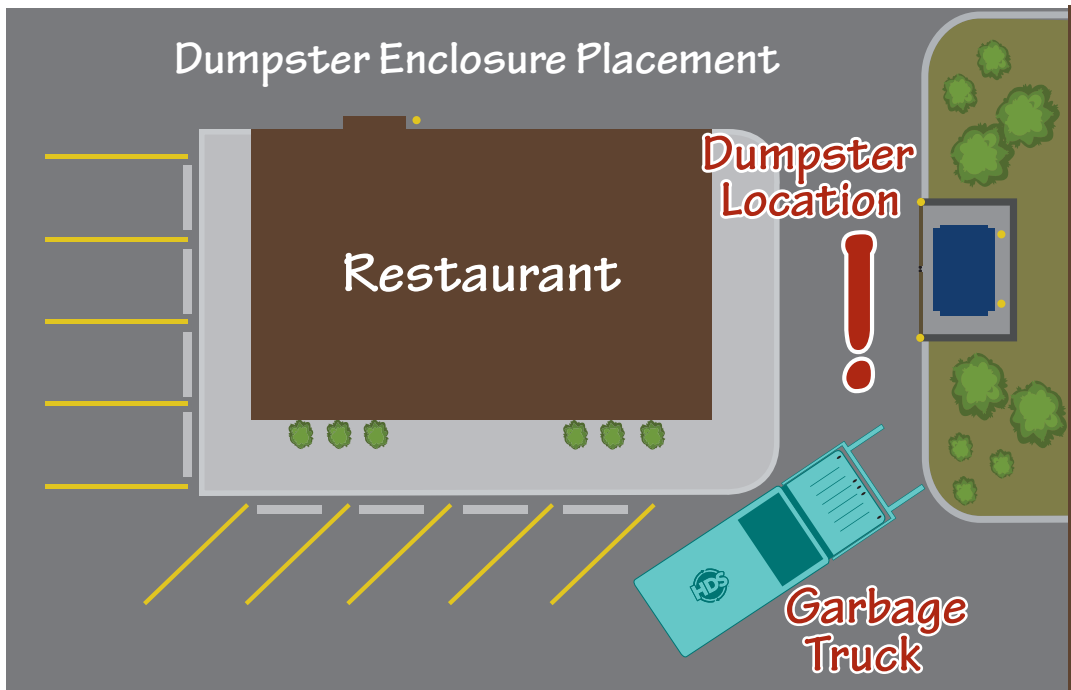

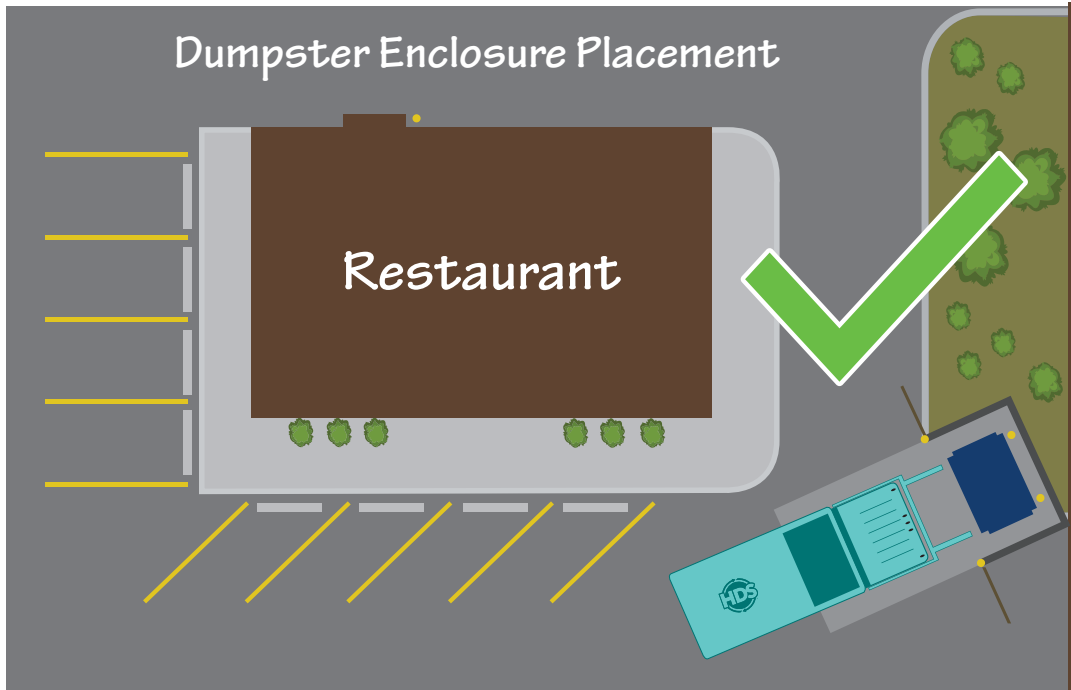

2 or 4 Yard Dumpster Minimal Enclosure Requirements

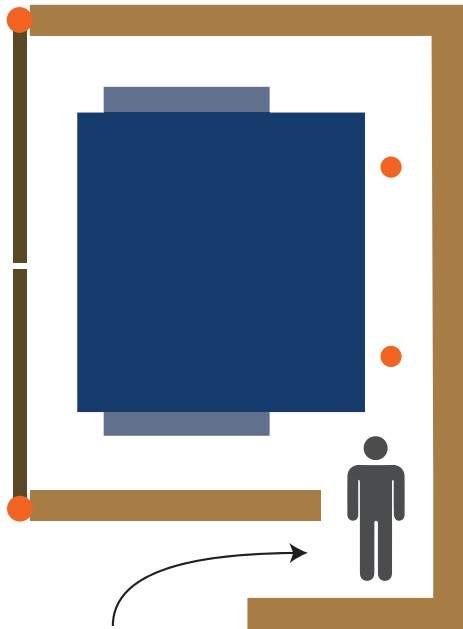

Garbage trucks require direct head-on access to your container. Garbage trucks cannot make tight turns.

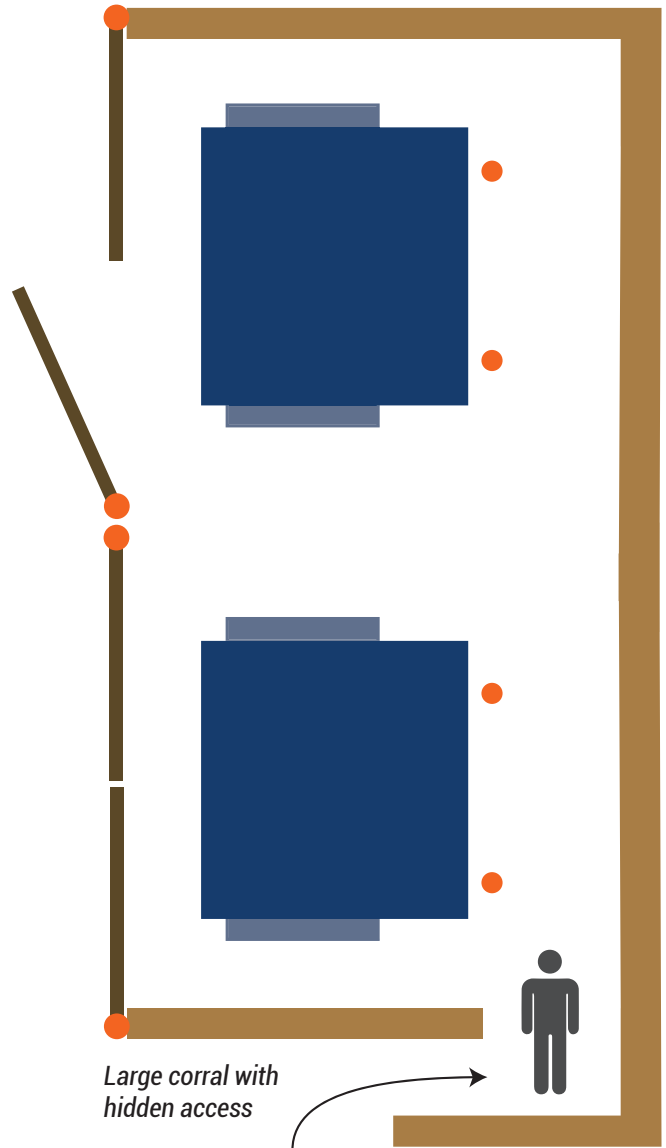

The location of your dumpster and your enclosure is an important decision. Garbage trucks require direct head-on access to your container. Garbage trucks cannot make tight turns.

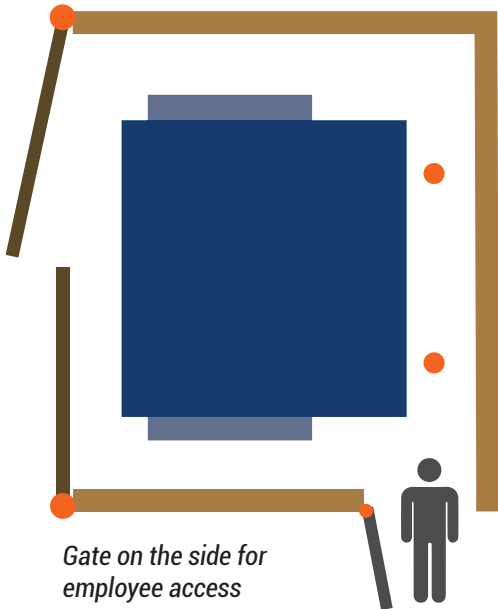

Corral Design Examples

Corral with hidden access

Large corral with hidden access

Gate on the side for employee access

Small corral for 2 yard dumpster
